## Application for CAD Automation and Mechanical Design Roles

Dear Hiring Manager,

I bring a combination of mechanical design experience and programming skills to help engineering teams develop products and automate repetitive CAD work. My experience at Pall Corporation and CG Power covers configurable models, manufacturing drawings, and product development.

At Pall Corporation, I work with Autodesk Inventor, VB.NET, and iLogic to support CAD configurators and automate models and drawings. I translate engineering requirements into repeatable design rules and contribute to workflow improvements and value engineering.

Previously, at CG Power and Industrial Solutions, I contributed to nine variants of 36 kV ring main units. My work included 3D modelling, sheet-metal design, manufacturing drawings, bills of materials, and testing support. This gave me practical insight into how designs move from CAD to manufacturing and validation.

I can contribute through parametric modelling, GD&T, engineering documentation, and CAD automation, with attention to both design intent and manufacturing requirements. I am particularly interested in opportunities where I can combine these capabilities to improve the consistency and efficiency of engineering work.

I would welcome the opportunity to discuss how I could contribute to your team. My CV is attached, and examples of my work are available on my portfolio website.

Thank you for your consideration.

Sincerely,

Kunal Karankal
